Claims 1-11

Documents 1-6 describe cardboard made of engineering plastic.

In engineering plastic, mixing a thermoplastic resin such as polystyrene and adding a rubber-like substance for purposes such as improving the impact resistance is generally a normal practice, such as for polyphenylene ether, and so there would be no particular difficulty involved for a person skilled in the art in adding a thermoplastic resin or a rubber-like substance to engineering plastic for the cardboard made of engineering plastic in documents 1-6.
